

Immigrant Sentiment and Labour Market Vulnerability

Economic Perceptions of Immigration in Dualized Labour Markets

Anthony Kevins¹ & Naomi Lightman²

¹School of Governance, Utrecht University

²Department of Sociology, University of Calgary

2018/12/16

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages
- Immigrants drain public coffers

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages
- Immigrants drain public coffers

Economic worries tied to broader anti-immigrant attitudes as well

Background

Building from three literatures:

Background

Building from three literatures:

1. Individual Perceptions of the Economic Contribution of Immigrants

Background

Building from three literatures:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - Human capital: low-skill/education levels associated with anti-immigrant attitudes

Background

Building from three literatures:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - Human capital: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration

Background

Building from three literatures:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - Human capital: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration
 - Resource scarcity: lower GDP and/or higher unemployment rates associated with anti-immigrant attitudes

Background

Building from three literatures:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - Human capital: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration
 - Resource scarcity: lower GDP and/or higher unemployment rates associated with anti-immigrant attitudes
3. Outsiderness and Immigrant Sentiment

Background

Building from three literatures:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - Human capital: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration
 - Resource scarcity: lower GDP and/or higher unemployment rates associated with anti-immigrant attitudes
3. Outsiderness and Immigrant Sentiment
 - Precarity: labour market risk exposure may shape economic insecurity (even controlling for related measures)

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)

The Survey Data

- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)
- Dependent Variable:

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)
- Dependent Variable:
 - Would you say it is generally bad or good for [country]'s economy that people come to live here from other countries?

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)
- Dependent Variable:
 - Would you say it is generally bad or good for [country]'s economy that people come to live here from other countries?
 - 11-point scale ranging from "bad for the economy" (0) to "good for the economy" (10)

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment
 3. Subtract from corresponding country rates

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment
 3. Subtract from corresponding country rates
 4. Average the three standardized deviations

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment
 3. Subtract from corresponding country rates
 4. Average the three standardized deviations
 5. Apply score to subgroup members in ESS

Hypotheses

- H1: Increased outsidersness → more negative attitudes toward the economic contribution of immigrants

Hypotheses

- H1: Increased outsidersness → more negative attitudes toward the economic contribution of immigrants
- H2: Higher unemployment rates → heightened impact of labour market vulnerability on attitudes toward the economic contribution of immigrants

Hypotheses

- H1: Increased outsidersness → more negative attitudes toward the economic contribution of immigrants
- H2: Higher unemployment rates → heightened impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
- H3: Higher GDP → heightened impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
-

Hypotheses

- H1: Increased outsidersness → more negative attitudes toward the economic contribution of immigrants
- H2: Higher unemployment rates → heightened impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
- H3: Higher GDP → heightened impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
-

Economic worries tied to broader anti-immigrant attitudes as well

Research Design

- DV: Perceived impact of immigrants on the economy

Research Design

- DV: Perceived impact of immigrants on the economy
- **Key variables:** outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates

Research Design

- DV: Perceived impact of immigrants on the economy
- Key variables: outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates
- **Key individual-level controls:** factors related to precarity (e.g. education, union membership, labour market status, income decile)

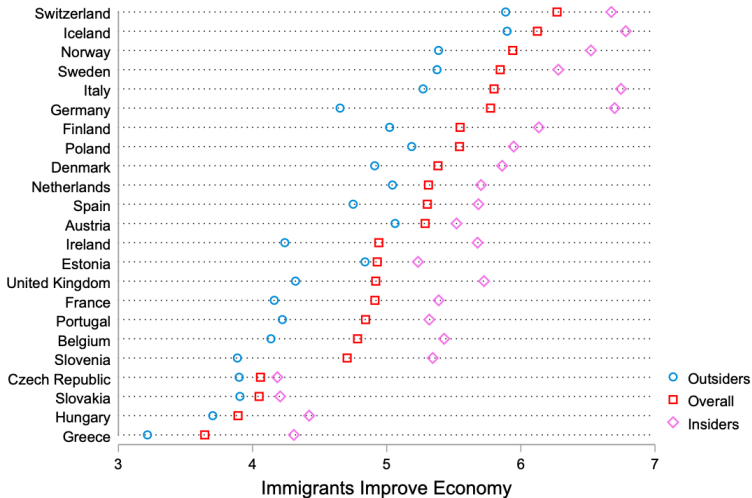

Research Design

- DV: Perceived impact of immigrants on the economy
- Key variables: outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates
- Key individual-level controls: factors related to precarity (e.g. education, union membership, labour market status, income decile)
- **Key country-level controls:** changes in GDP, % of foreign-born population, and % of migrant population with tertiary education

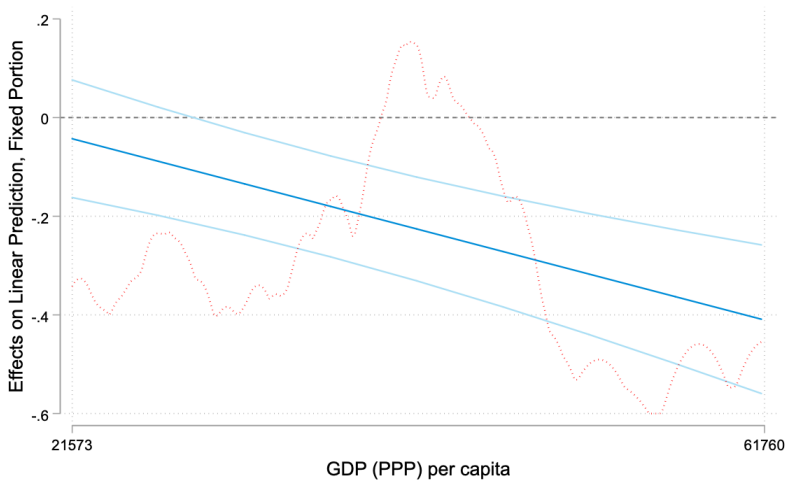

Research Design

- DV: Perceived impact of immigrants on the economy
- Key variables: outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates
- Key individual-level controls: factors related to precarity (e.g. education, union membership, labour market status, income decile)
- Key country-level controls: changes in GDP, % of foreign-born population, and % of migrant population with tertiary education
- **Models:** GLS with country fixed effects and MLE with design and population weights

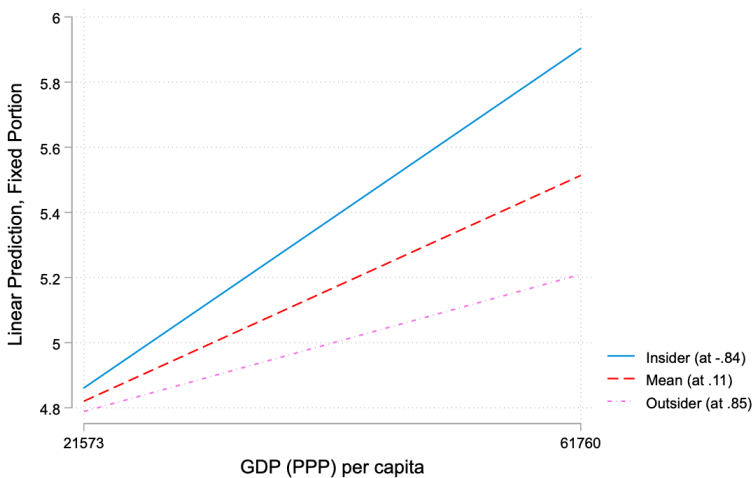

Results

Results

Results

Major Findings

Major Findings

- Labour market vulnerability correlated with more negative beliefs (even controlling for related factors)

Major Findings

- Labour market vulnerability correlated with more negative beliefs (even controlling for related factors)
- No evidence of an interaction between vulnerability and national unemployment rates

Major Findings

- Labour market vulnerability correlated with more negative beliefs (even controlling for related factors)
- No evidence of an interaction between vulnerability and national unemployment rates
- Significant interaction between vulnerability and GDP

Major Findings

- Labour market vulnerability correlated with more negative beliefs (even controlling for related factors)
- No evidence of an interaction between vulnerability and national unemployment rates
- Significant interaction between vulnerability and GDP
 - Labour market insiders and outsiders holding more distinct attitudes in higher GDP countries

Conclusion

Conclusion
