

Immigrant Sentiment and Labour Market Vulnerability

Economic Perceptions of Immigration in Dualized Labour Markets

Anthony Kevins¹ & Naomi Lightman²

¹School of Governance, Utrecht University

²Department of Sociology, University of Calgary

2018/12/17

Introduction

Immigration tied to numerous economic fears:

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages
- Immigrants drain public coffers

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages
- Immigrants drain public coffers

Economic worries tied to broader anti-immigrant attitudes as well

Introduction

Immigration tied to numerous economic fears:

- Immigrants take away “our” jobs
- Immigrants drive down wages
- Immigrants drain public coffers

Economic worries tied to broader anti-immigrant attitudes as well

Research Question: What role do economic insecurity and resource scarcity play in shaping these attitudes within and across countries?

Background

Build from three research areas:

Background

Build from three research areas:

1. Individual Perceptions of the Economic Contribution of Immigrants

Background

Build from three research areas:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - *Human capital*: low-skill/education levels associated with anti-immigrant attitudes

Background

Build from three research areas:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - *Human capital*: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration

Background

Build from three research areas:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - *Human capital*: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration
 - *Resource scarcity*: lower GDP and/or higher unemployment rates associated with anti-immigrant attitudes

Background

Build from three research areas:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - *Human capital*: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration
 - *Resource scarcity*: lower GDP and/or higher unemployment rates associated with anti-immigrant attitudes
3. Dualization and labour market vulnerability

Background

Build from three research areas:

1. Individual Perceptions of the Economic Contribution of Immigrants
 - *Human capital*: low-skill/education levels associated with anti-immigrant attitudes
2. Impact of National Economic Circumstances on Attitudes Towards Immigration
 - *Resource scarcity*: lower GDP and/or higher unemployment rates associated with anti-immigrant attitudes
3. Dualization and labour market vulnerability
 - *Precarity*: labour market risk increases economic insecurity, even holding related measures (e.g. skill, education, income) constant

Hypotheses

- H1: Greater outsidersness → more negative attitudes toward the economic contribution of immigrants

Hypotheses

- H1: Greater outsidersness → more negative attitudes toward the economic contribution of immigrants
- H2: Higher unemployment rates → stronger impact of labour market vulnerability on attitudes toward the economic contribution of immigrants

Hypotheses

- H1: Greater outsidersness → more negative attitudes toward the economic contribution of immigrants
- H2: Higher unemployment rates → stronger impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
- H3: Higher GDP → stronger impact of labour market vulnerability on attitudes toward the economic contribution of immigrants

Hypotheses

- H1: Greater outsidersness → more negative attitudes toward the economic contribution of immigrants
- H2: Higher unemployment rates → stronger impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
- H3: Higher GDP → stronger impact of labour market vulnerability on attitudes toward the economic contribution of immigrants
- H4: Higher GDP → weaker impact of labour market vulnerability on attitudes toward the economic contribution of immigrants

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)
- Dependent Variable:

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)
- Dependent Variable:
 - Would you say it is generally bad or good for [country]'s economy that people come to live here from other countries?

The Survey Data

- Rounds 4-7 of the European Social Survey (2008, 2010, 2012, and 2014)
- 23 European countries
- 57051 respondents
 - Per-wave respondents varies from 315 (Italy, 2012) to 1484 (Germany, 2014)
- Dependent Variable:
 - Would you say it is generally bad or good for [country]'s economy that people come to live here from other countries?
 - 11-point scale ranging from "bad for the economy" (0) to "good for the economy" (10)

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment
 3. Subtract from corresponding country means

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment
 3. Subtract from corresponding country means
 4. Average the three standardized deviation scores

Measuring Labour Market Vulnerability

- European Union Statistics on Income and Living Conditions micro-data
- Continuous “outsiderness” scores (Schwander and Häusermann 2013)
 1. Parse respondents into subgroups based on occupation, gender, age, and country
 2. Calculate mean subgroup rates of temporary contracts, involuntary part-time status, and unemployment
 3. Subtract from corresponding country means
 4. Average the three standardized deviation scores
 5. Apply value to subgroup members in ESS

Research Design

- DV: Perceived impact of immigrants on the economy

Research Design

- DV: Perceived impact of immigrants on the economy
- **Explanatory variables:** outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates

Research Design

- DV: Perceived impact of immigrants on the economy
- Explanatory variables: outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates
- **Key individual-level controls:** factors related to precarity (e.g. education, union membership, labour market status, income decile)

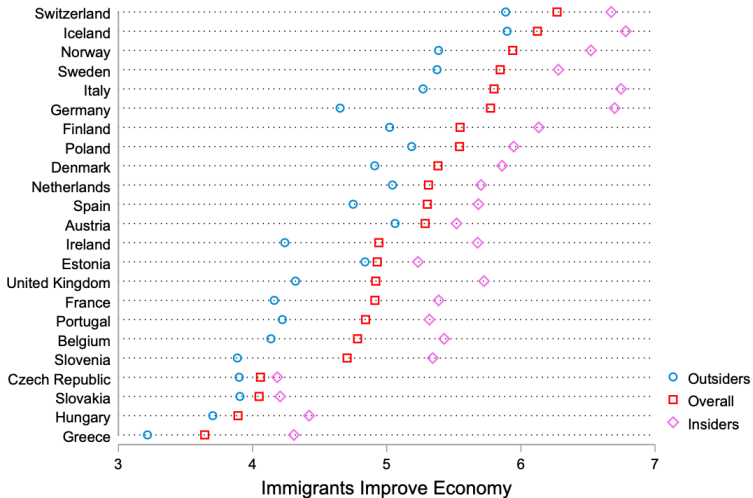

Research Design

- DV: Perceived impact of immigrants on the economy
- Explanatory variables: outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates
- Key individual-level controls: factors related to precarity (e.g. education, union membership, labour market status, income decile)
- **Country-level controls:** changes in GDP, % of foreign-born population, and % of migrant population with tertiary education

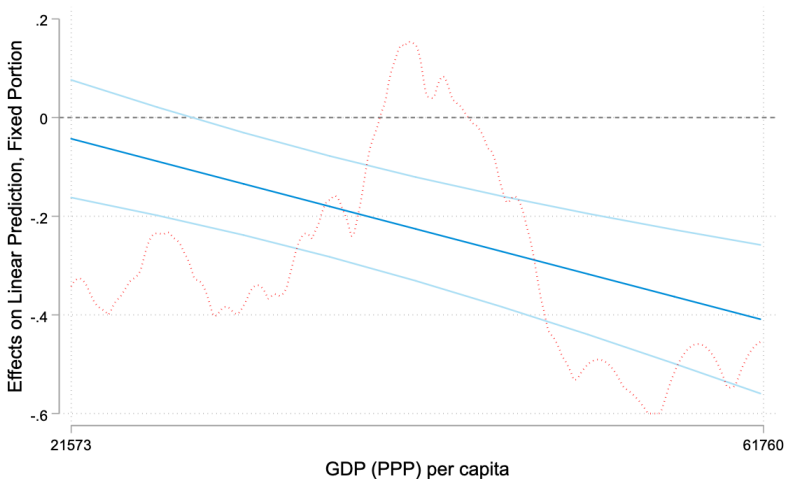

Research Design

- DV: Perceived impact of immigrants on the economy
- Explanatory variables: outsidersness scores, independently and interacted with GDP (PPP) and national unemployment rates
- Key individual-level controls: factors related to precarity (e.g. education, union membership, labour market status, income decile)
- Country-level controls: changes in GDP, % of foreign-born population, and % of migrant population with tertiary education
- **Models:** GLS with country fixed effects and MLE with design and population weights

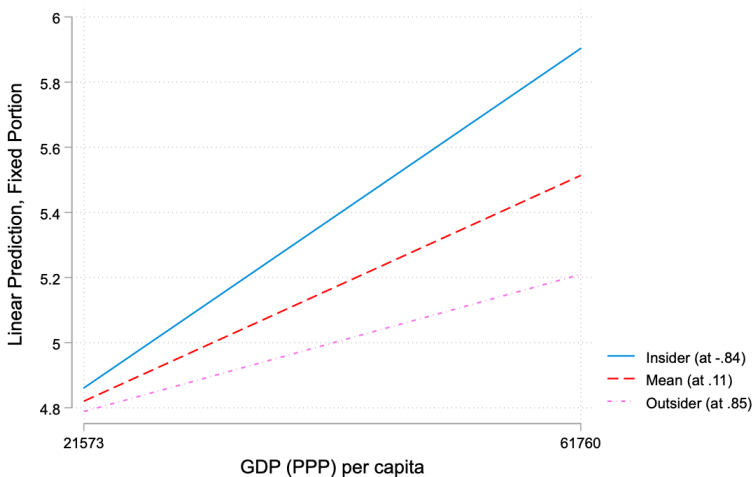

Distribution

Marginal Effect of Outsiderness

Linear Prediction

Conclusions

Overall findings:

Conclusions

Overall findings:

- Labour market vulnerability correlated with more negative beliefs

Conclusions

Overall findings:

- Labour market vulnerability correlated with more negative beliefs
 - Finding robust to controlling for related factors (e.g. education, union membership, labour market status, income decile)

Conclusions

Overall findings:

- Labour market vulnerability correlated with more negative beliefs
 - Finding robust to controlling for related factors (e.g. education, union membership, labour market status, income decile)
- No evidence of an interaction between vulnerability and national unemployment rates

Conclusions

Overall findings:

- Labour market vulnerability correlated with more negative beliefs
 - Finding robust to controlling for related factors (e.g. education, union membership, labour market status, income decile)
- No evidence of an interaction between vulnerability and national unemployment rates
- Significant interaction between vulnerability and GDP

Conclusions

Overall findings:

- Labour market vulnerability correlated with more negative beliefs
 - Finding robust to controlling for related factors (e.g. education, union membership, labour market status, income decile)
- No evidence of an interaction between vulnerability and national unemployment rates
- Significant interaction between vulnerability and GDP
 - Labour market insiders and outsiders hold more distinct attitudes in higher GDP countries
